## ***GATESAVER Tailgate from Crysteel®***

Retrofit any dump body tailgate and update to include a hydraulic tailgate quickly and easily.

Crysteel® Manufacturing offers the patented GATESAVER, a product designed to change a standard dump body tailgate into a power high-lift tailgate. The GATESAVER improves a dump body's operating versatility without the need to replace the entire body.

Crysteel's GATESAVER increases the tailgate opening 15 inches higher than the tailgate itself, allowing up to 6 feet of clearance when dumping. Large debris and bulky items exit quickly and completely.

Provided with an electric motor and hydraulic pump, no PTO is required. Additionally, the GATESAVER is pre-assembled for simple installation and will adapt to most manufacturers' dump body tailgates.

Additional Features of the GATESAVER:

- Hydraulic cylinders are located inside for protection from the elements and dump bed loads.
- Includes a traditional style tailgate hinge plate, allowing the tailgate to be used for standard dump-through operations.
- Crysteel Exclusive – Patent # 6,767,173
